CoTrace

Facilitator Orientation Module

Storyboard / Wireframe

Presented by:
Zandaley M. Bothma

Date: 23 September 2026
MCOL8411w

What is CoTrace?

- An AI-integrated tertiary learning platform: *human-AI reasoning made visible, not policed* (Ni Uanachain and Aouad, 2025).

- Captures dialogues, moments of cognitive friction, drafting decisions, and reflections as part of the assessment process.

- Helps students develop the metacognitive ability to evaluate their own AI-assisted learning process (Ni Uanachain and Aouad, 2025; Vendrell and Johnston, 2026).

Three-phase cycle:

Explore

Phase 1:
AI challenges thinking and supports source exploration through Socratic dialogue.

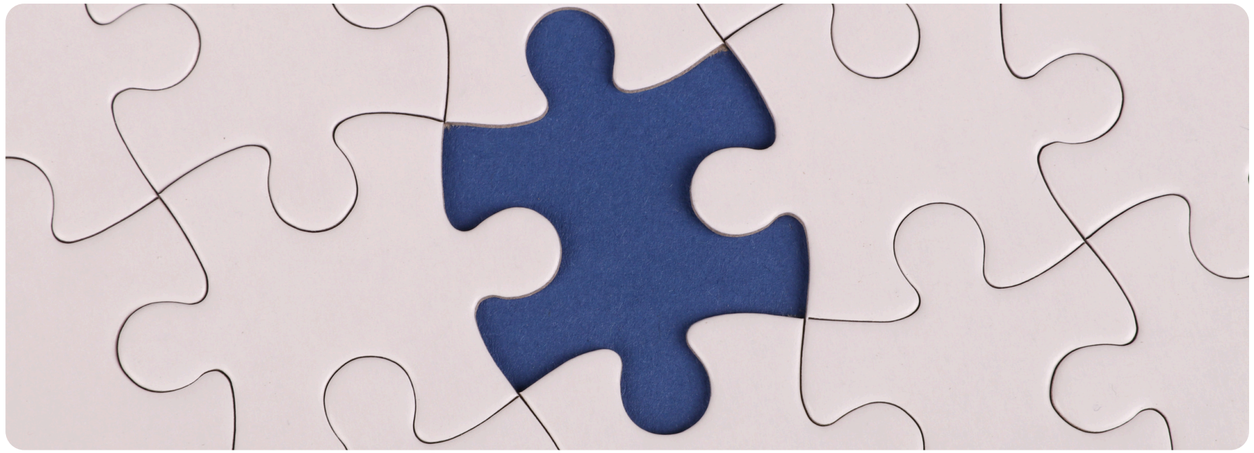

Draft

Phase 2:
Students develop their own ideas while AI provides support and prompts reflections.

Refine

Phase 3:
AI asks guiding questions to help students improve independently.

The gap this module addresses?

Context	Constraint	A New Role	Need
Partner institutions that value generativist learning	Lack of infrastructure to support it	Appoint *CoTrace* Learning Facilitators	Prepare and train facilitators for CoTrace integration

Source: Corbin et al., 2025

Purpose:

Operational

- To prepare facilitators to use the platform and support students through each phase.

Pedagogical

- For facilitators to understand why the platform works as it does.
- For them to enact its logic consistently.

Value:

Institutional

- To ensure consistency of the pedagogical model across contexts.

Professional

- Structured support through a major educator shift from ‘content provider’ → ‘cognitive orchestrator’ (Vendrell and Johnston, 2026).

1

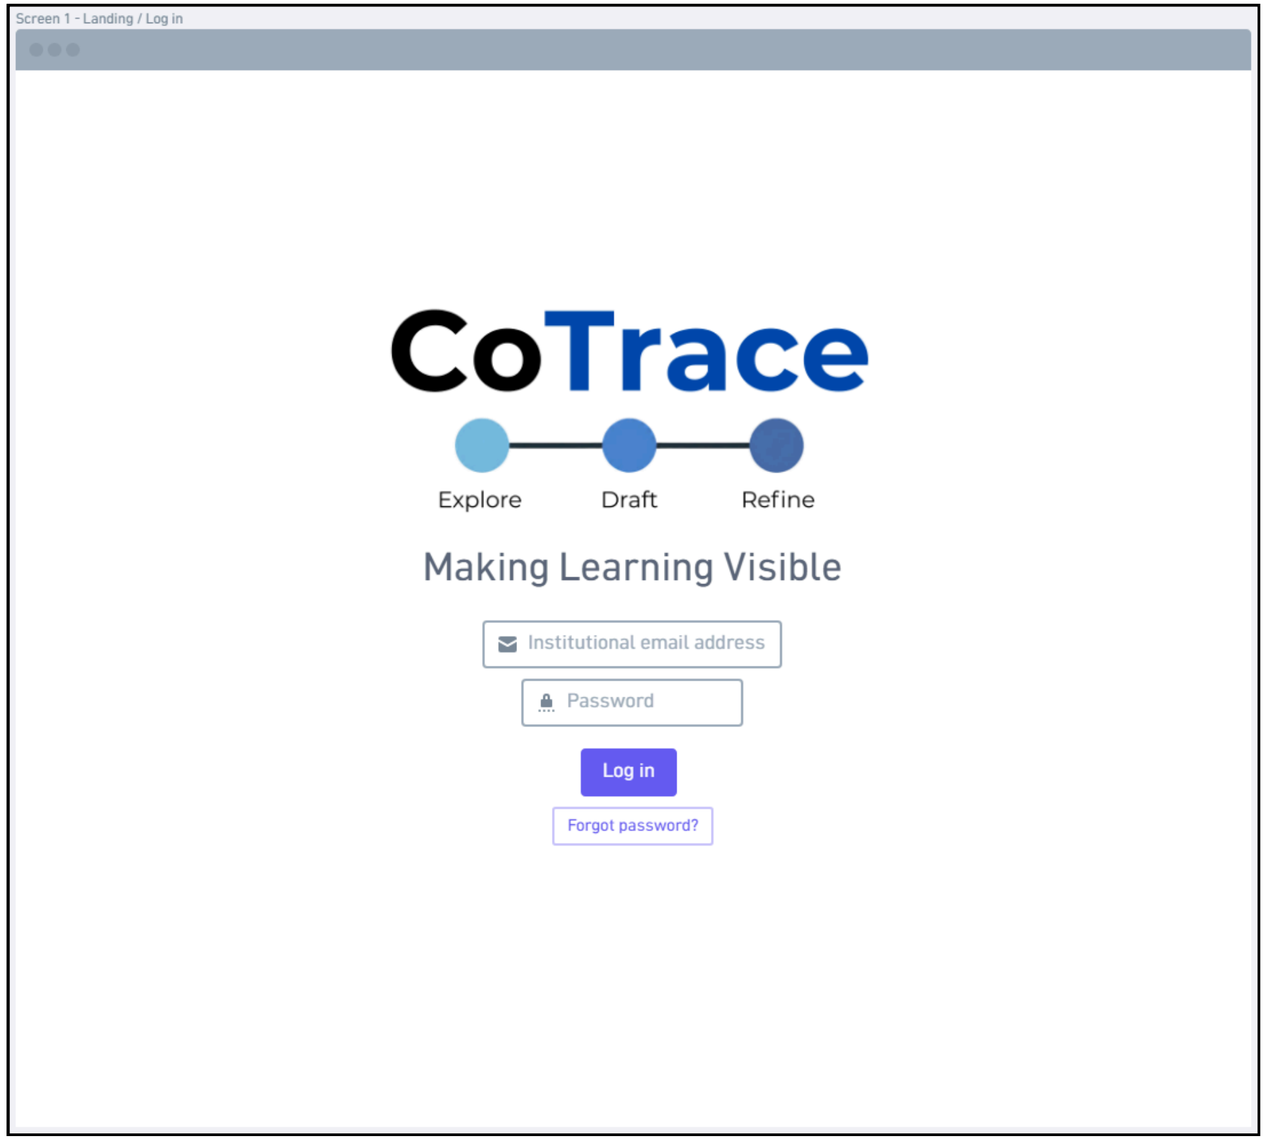

Unit 1:
Navigating the Platform

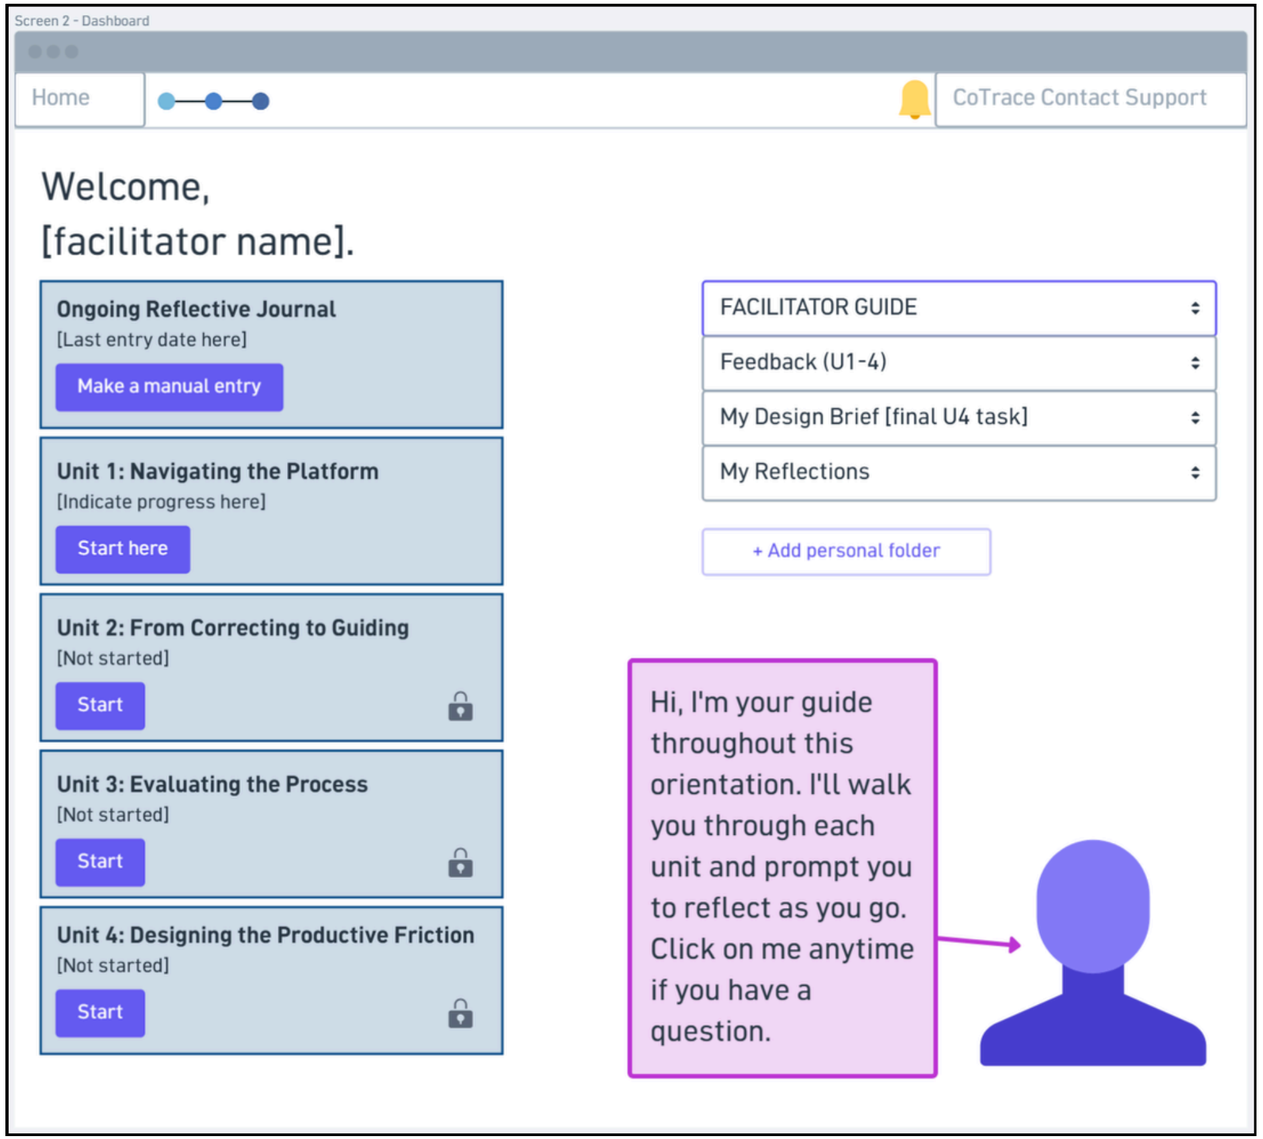

Activity: Interactive Guided Walkthrough

Assessment: Platform Navigation Task

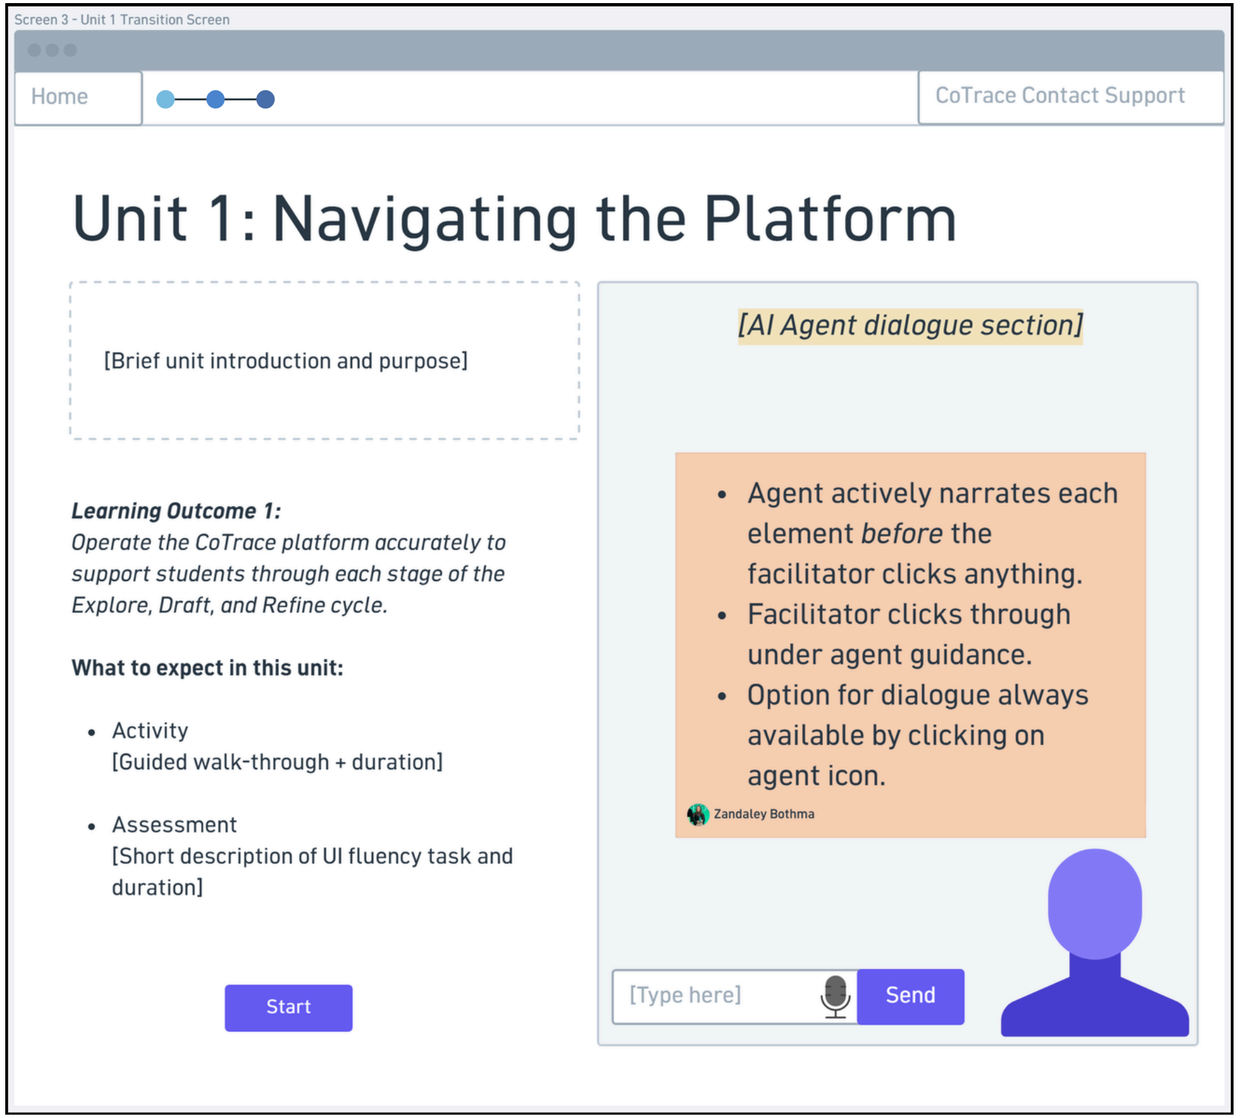

Screen 1 - Landing Page (wireframe)

Screen 2 - Dashboard (wireframe)

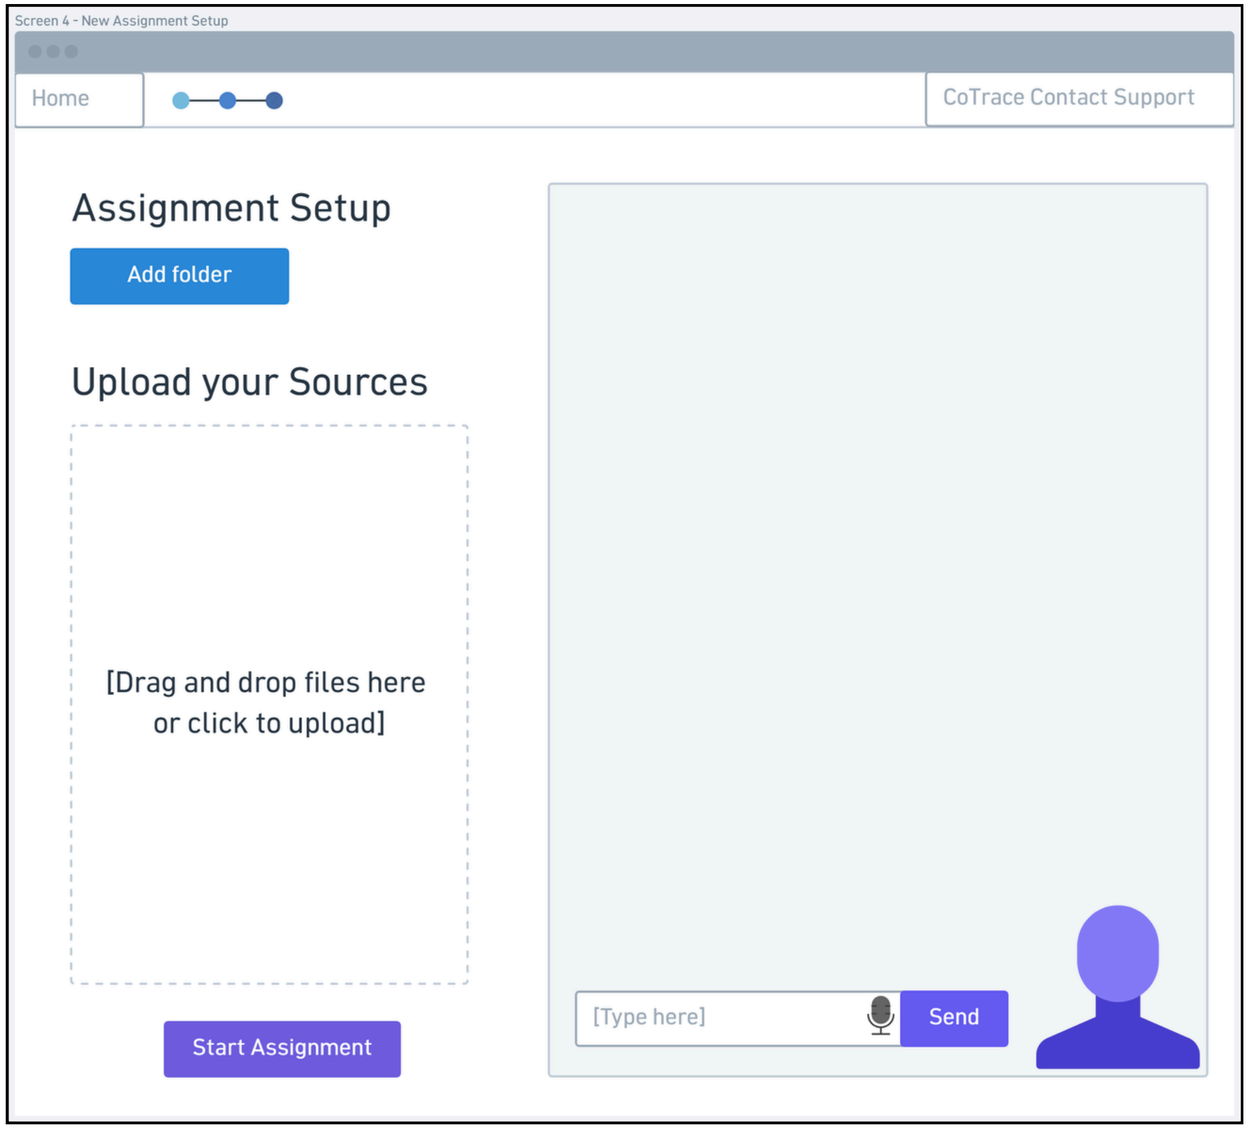

Screen 3 - Unit 1 Transition (wireframe)

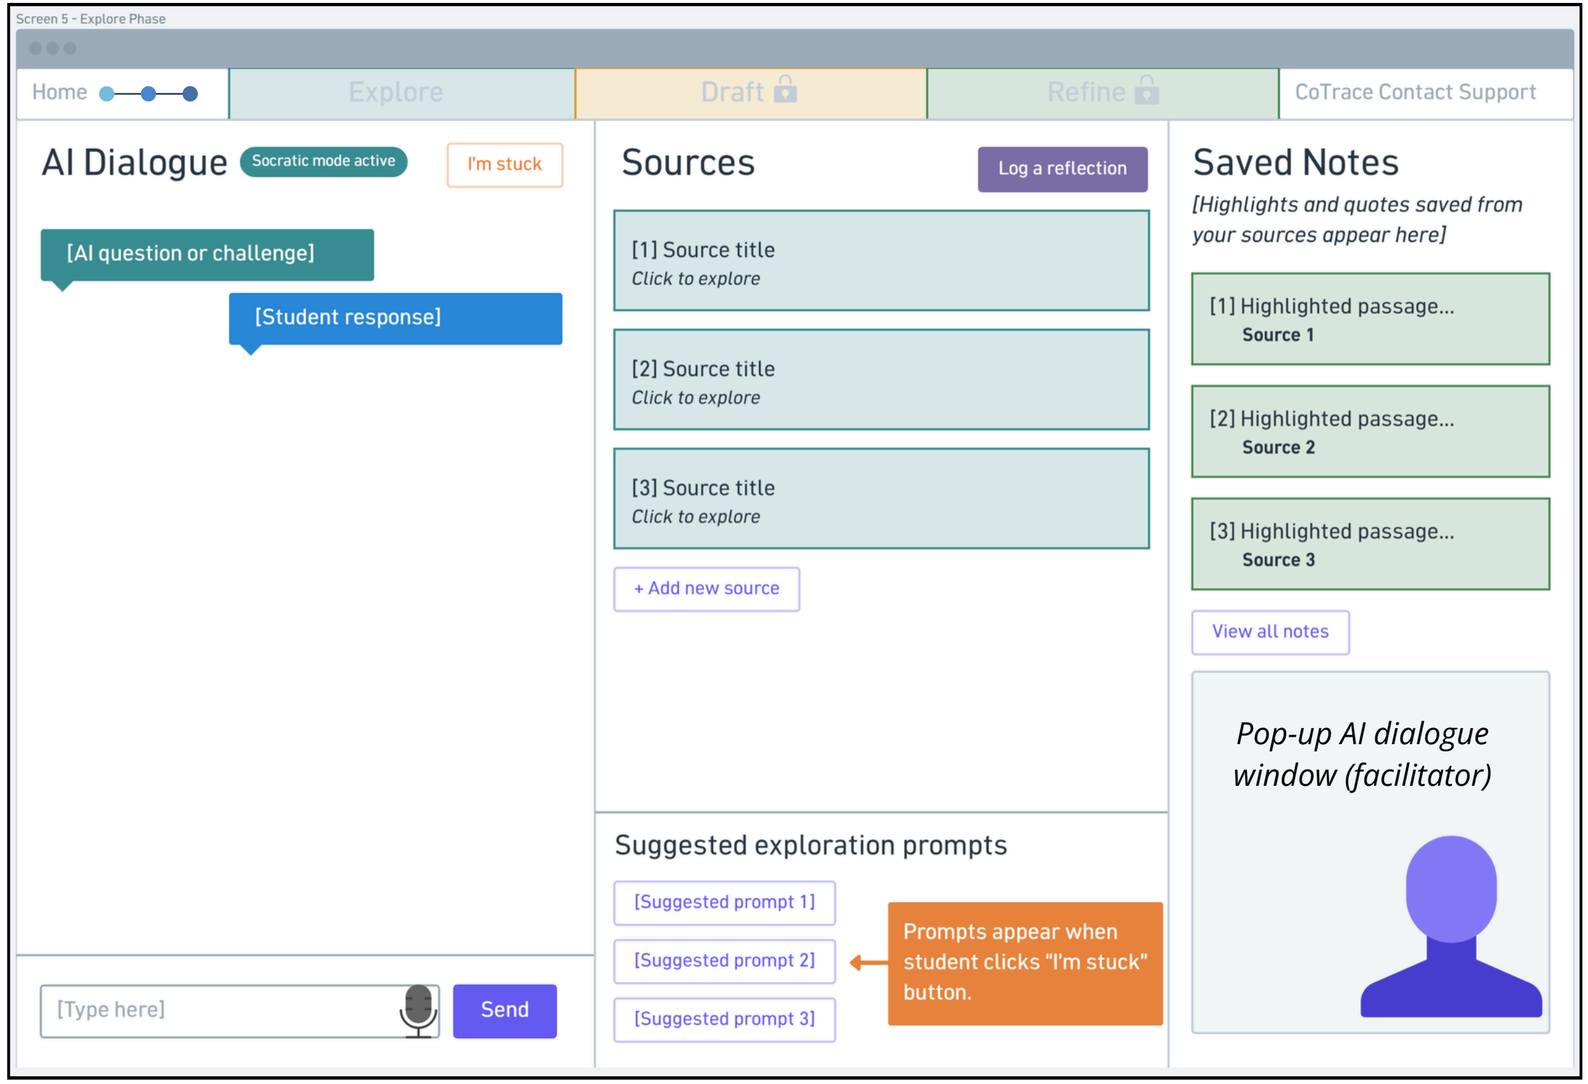

This transition screen applies to every unit but will only be displayed once here.

Screen 4 - New Assignment Setup (wireframe)

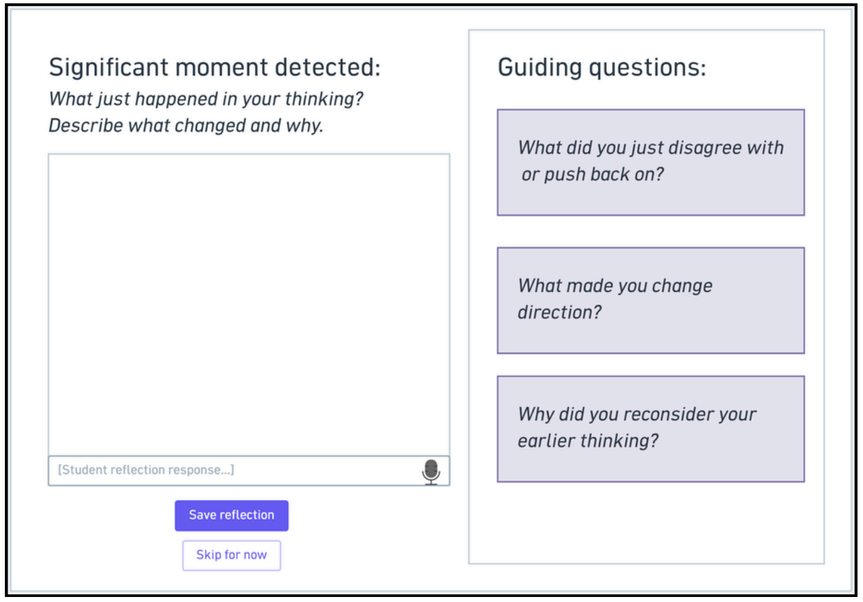

Screen 5 - Explore Phase (wireframe)

Note: The AI-powered pedagogical agent guides facilitators through these screens, drawing their attention to how CoTrace responds at each phase. It models the exact behaviour facilitators will need to reproduce with real students.

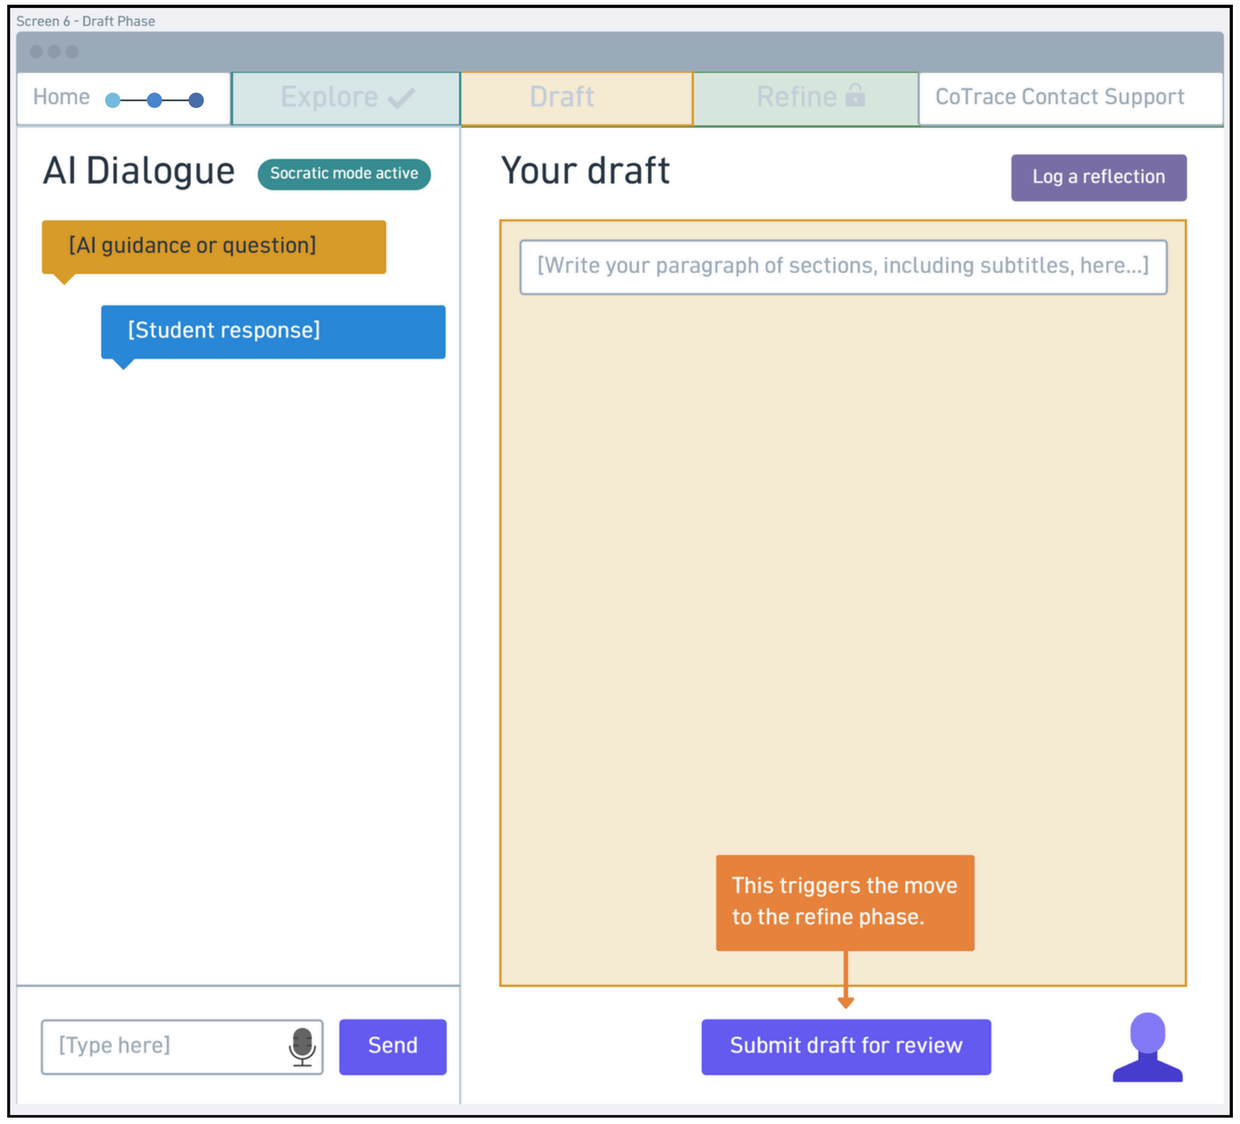

Pop-up window - Reflection

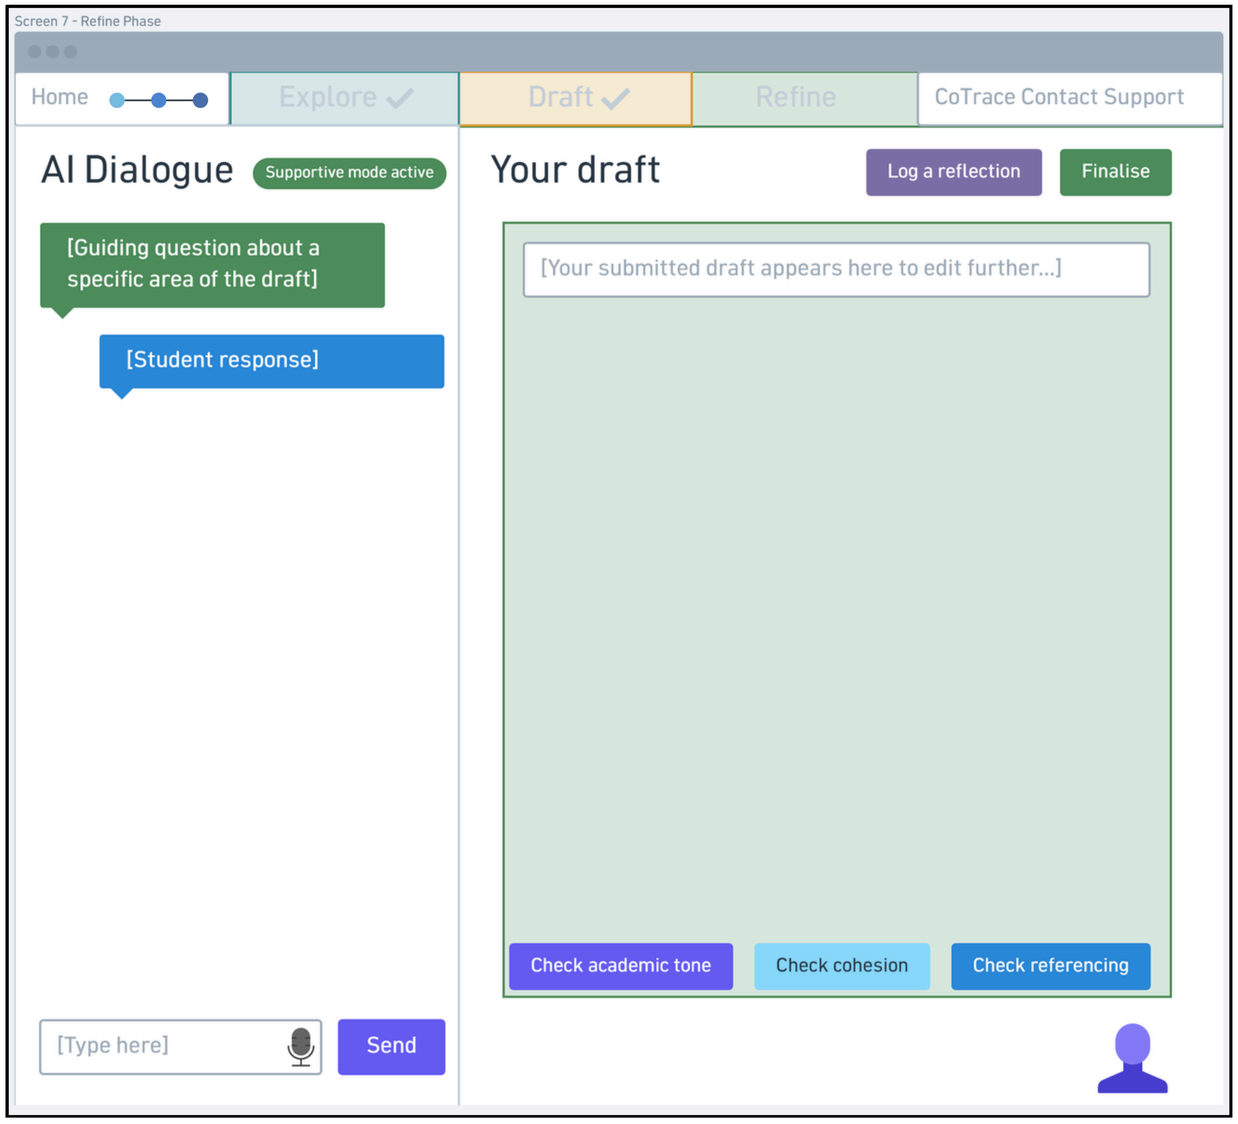

Note: Reflection pop-up is triggered throughout three-phase cycle with a scaffolded release for the user (student) to develop their own reflective agency.

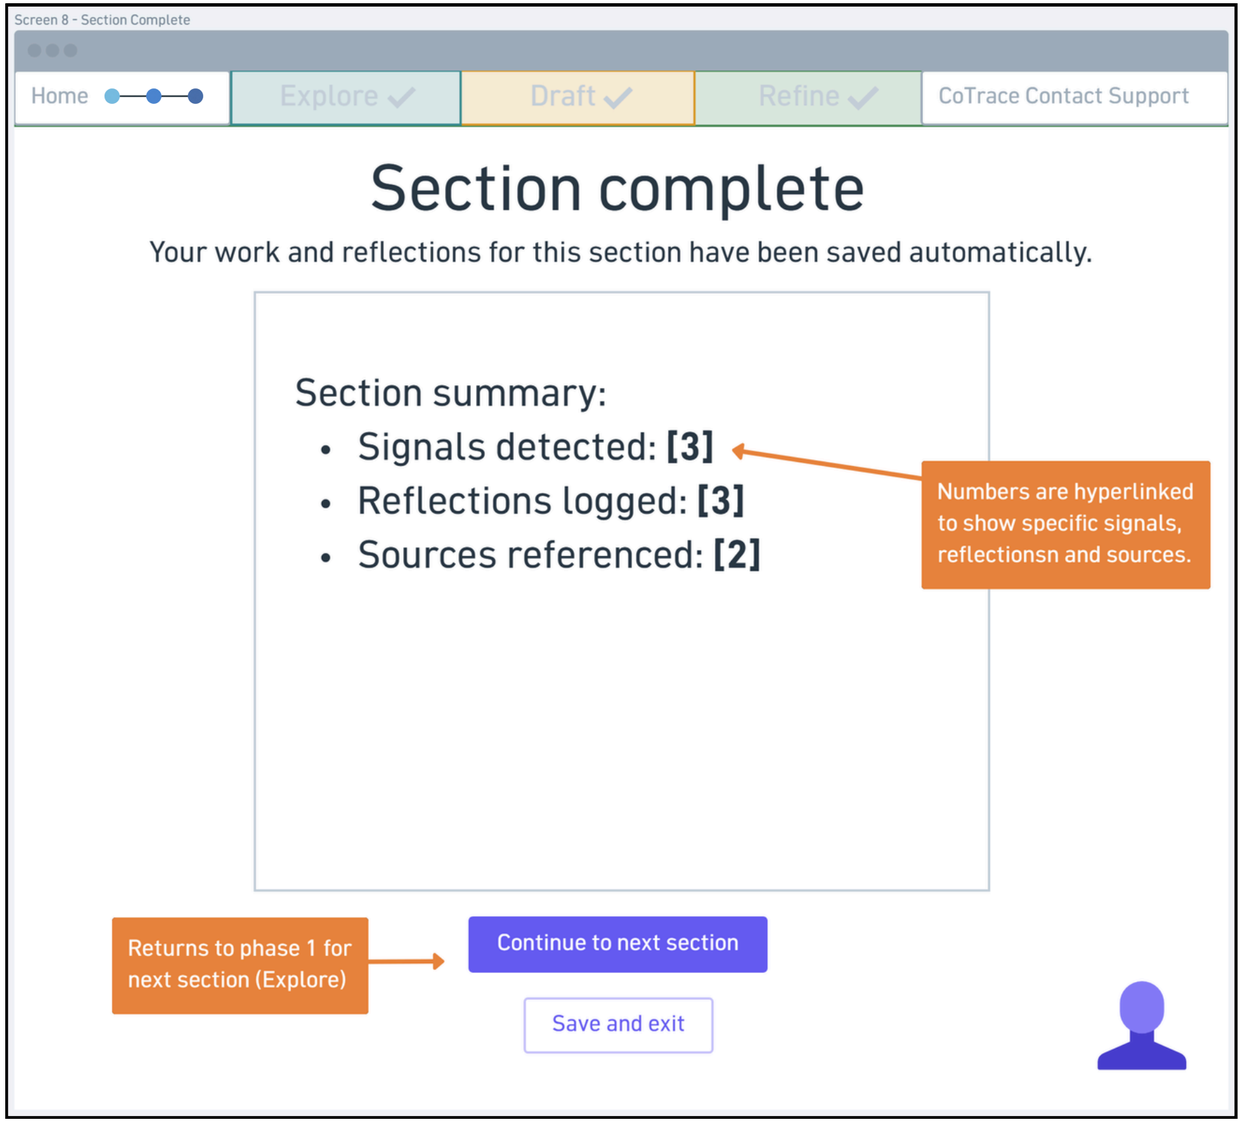

Screen 6 - Draft Phase (wireframe)

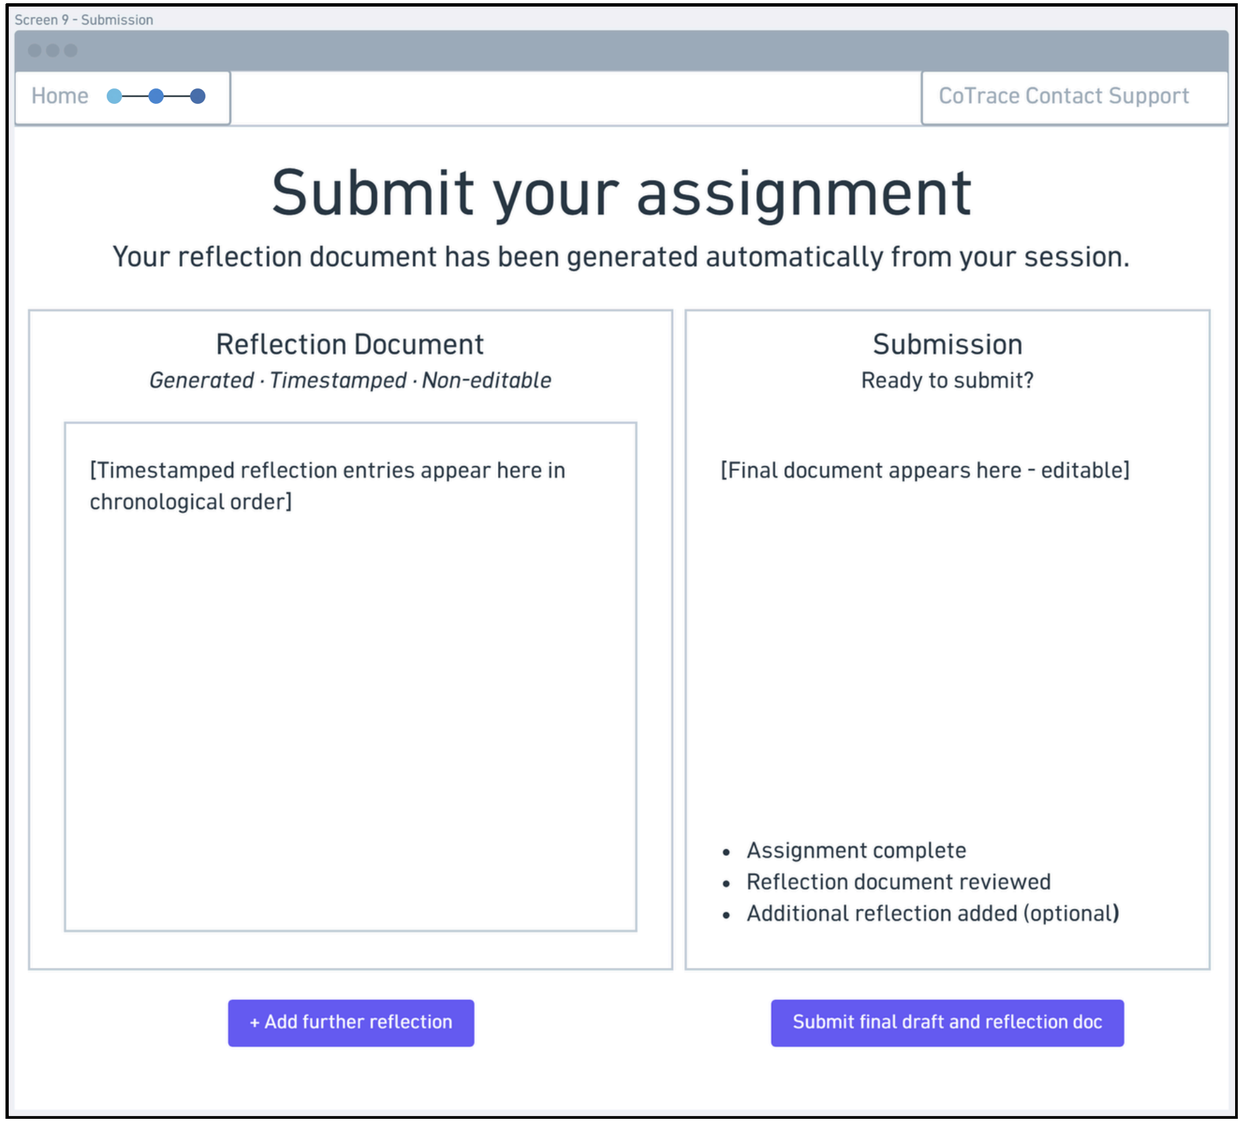

Screen 7 - Refine Phase (wireframe)

Screen 8 - Section Complete Page (wireframe)

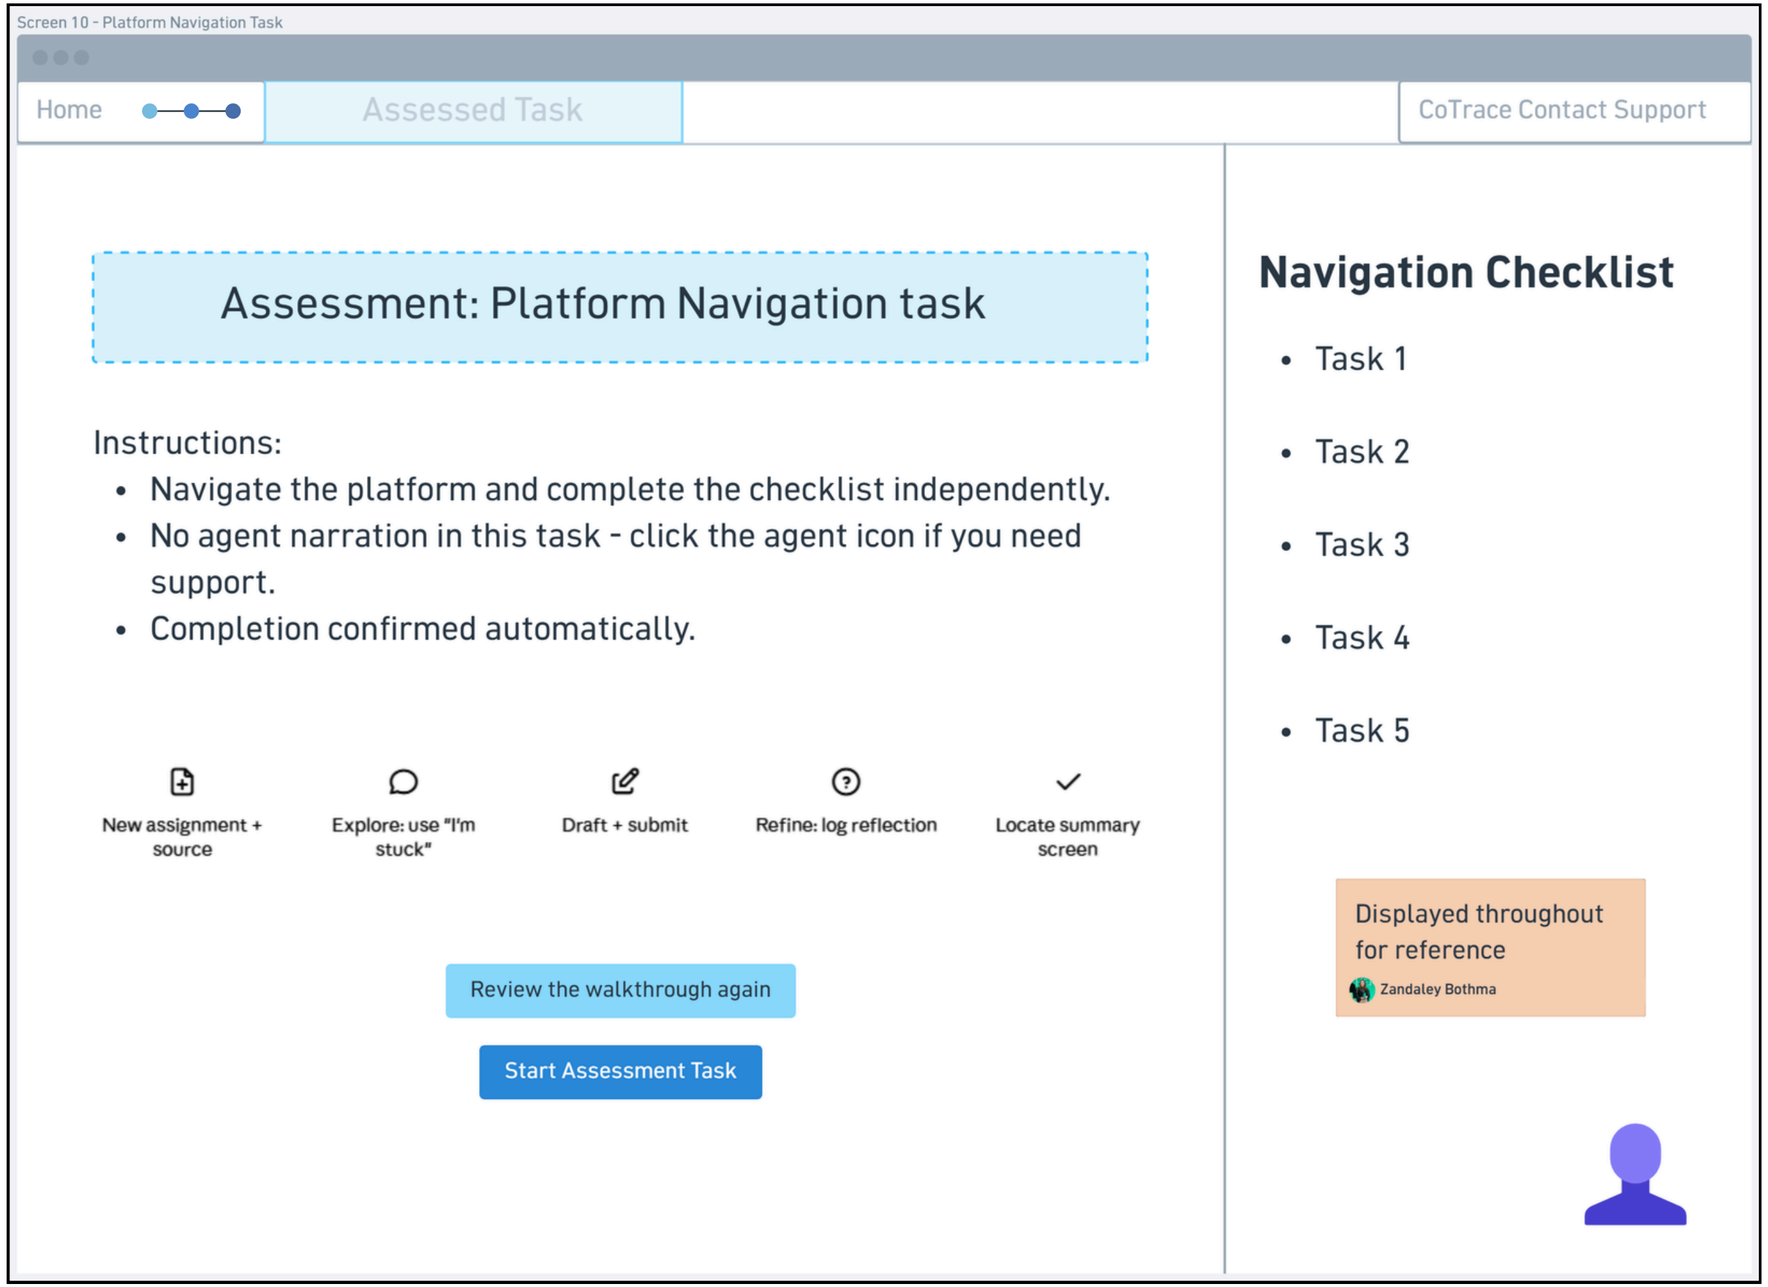

Screen 9 - Submission Page (wireframe)

Completing the walkthrough automatically takes facilitator to the assessment task (Platform Navigation Task).

Screen 10 - Platform Navigation Task (Assessment)

Feedback:

- Automated AI feedback.
- Confirmed via the platform's own section summary screen, no marker review (screen 9).

Completing the assessment automatically takes facilitator back to the dashboard/home page (Screen 2).

2

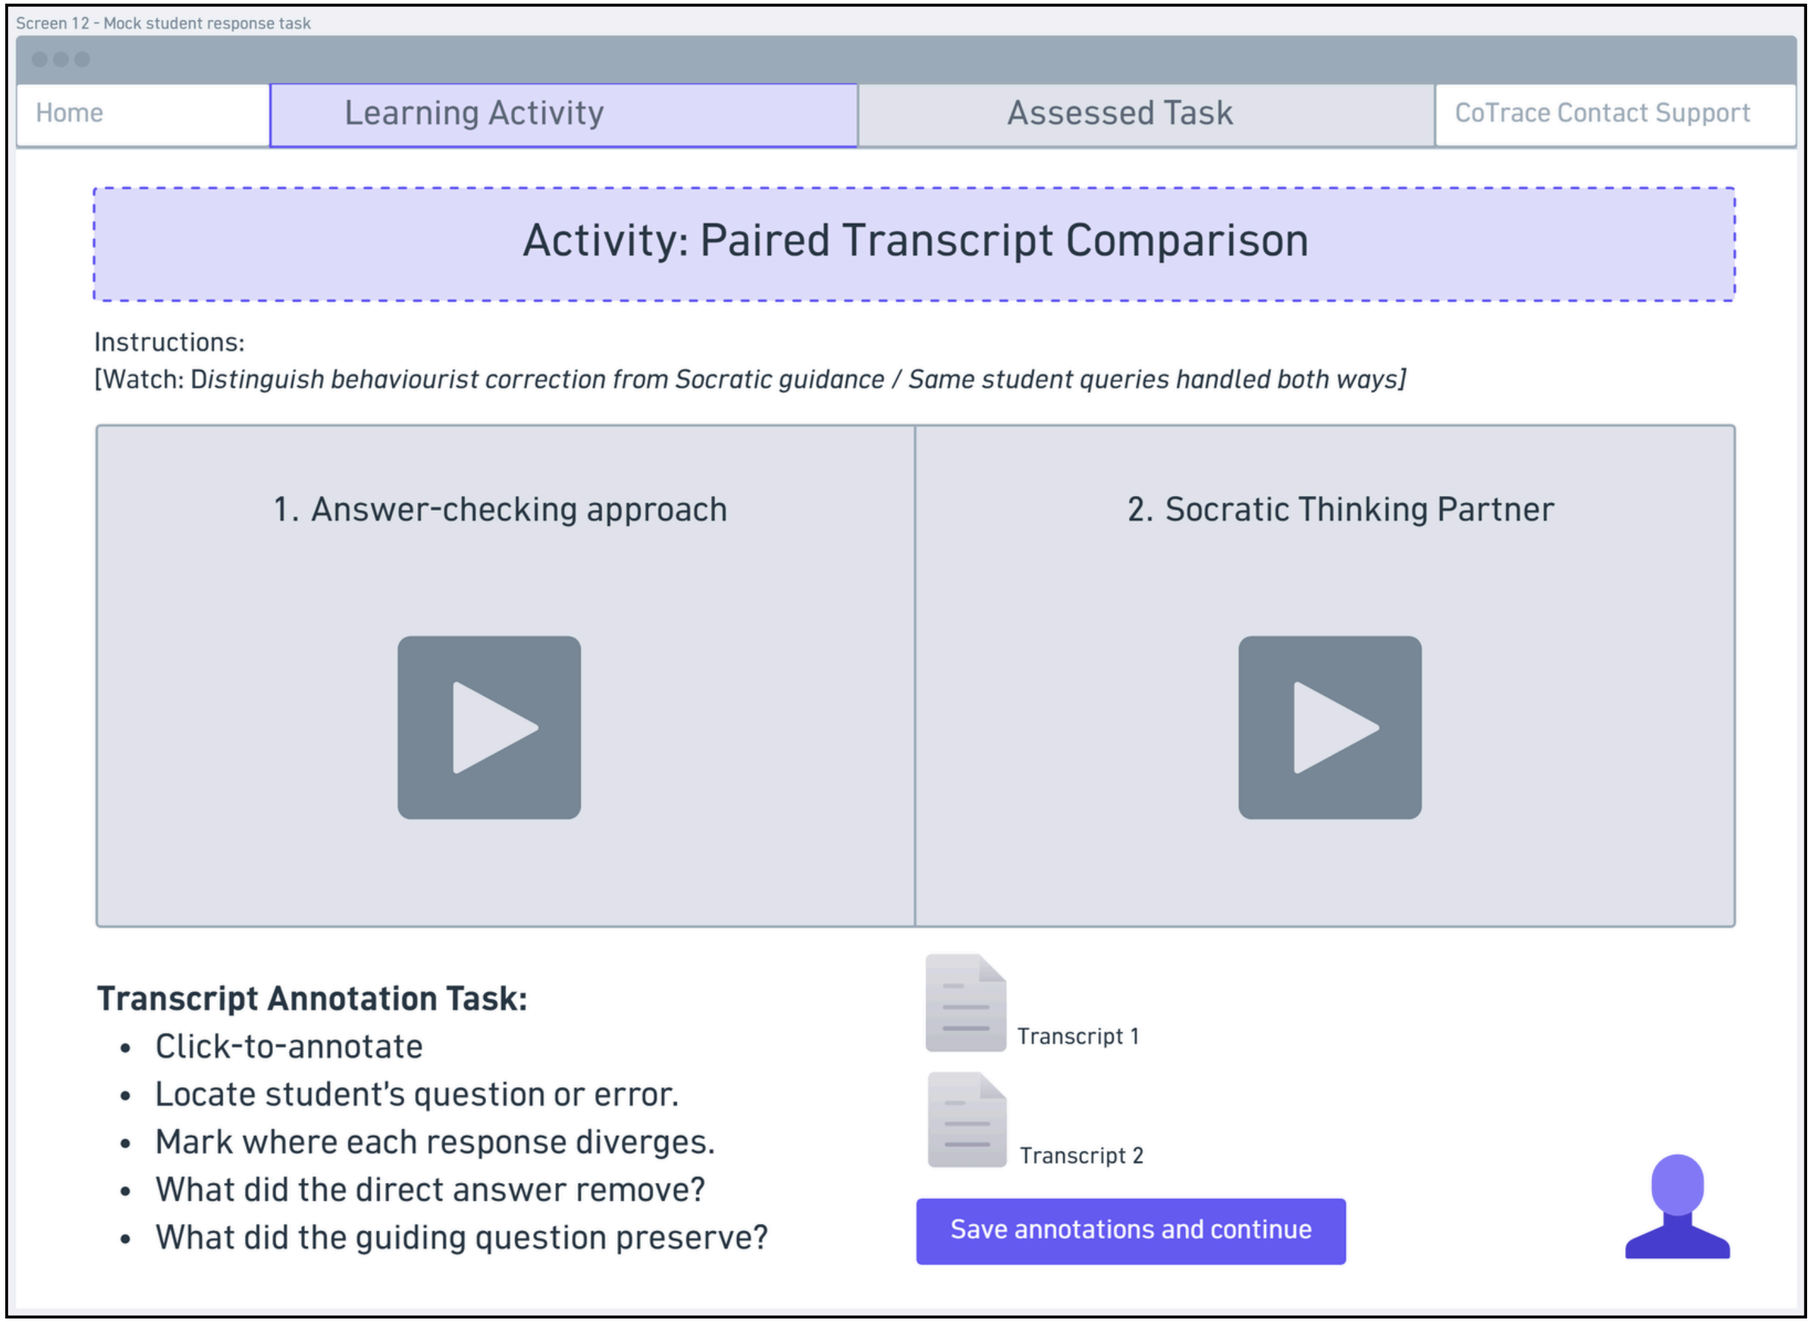

Unit 2:

From Correcting to Guiding

Activity: Paired Transcript Comparison
(Demo videos and transcript annotation)

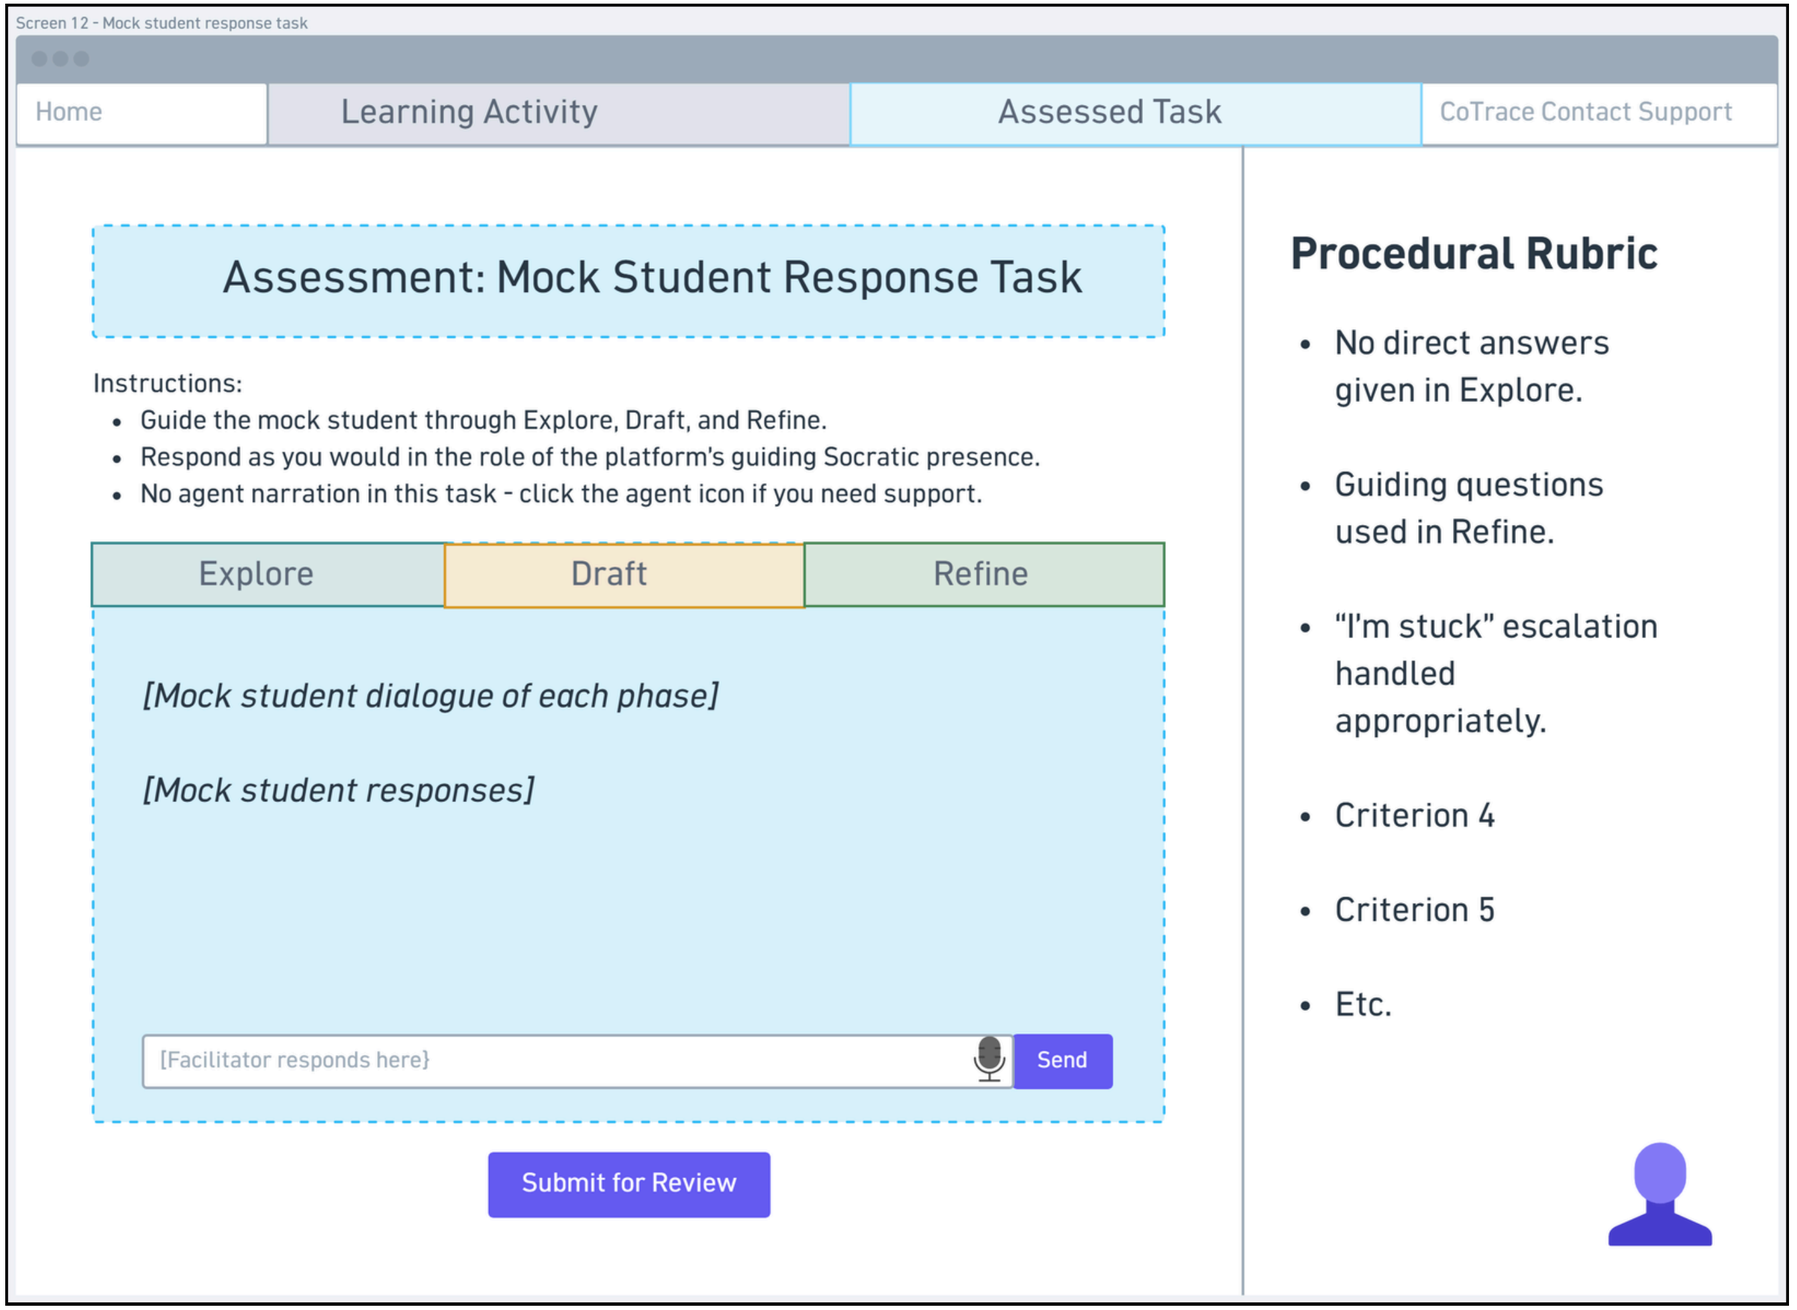

Assessment: Mock Student Response Task

Screen 11 - U2 Learning Activity

- Videos 1 and 2 present the same student queries handled two ways.
- Facilitators hear tone and phrasing for both, instead of only reading transcript text.
- This uses audio/short video rather than static text, since tone and delivery are central to the distinction being taught.

Screen 12 - U2 Assessment Task

- Screen: simple chat-style interface showing a fixed mock-student's messages at each of the three phases.
- Facilitator writes their own response in role (guiding not correcting).
- Small rubric reference panel visible alongside (linking back to the Facilitator Guide's worked examples).

Feedback:

- **AI-generated first-pass check** against the procedural rubric.
- Followed by a fuller **human comment** on guiding-question quality.

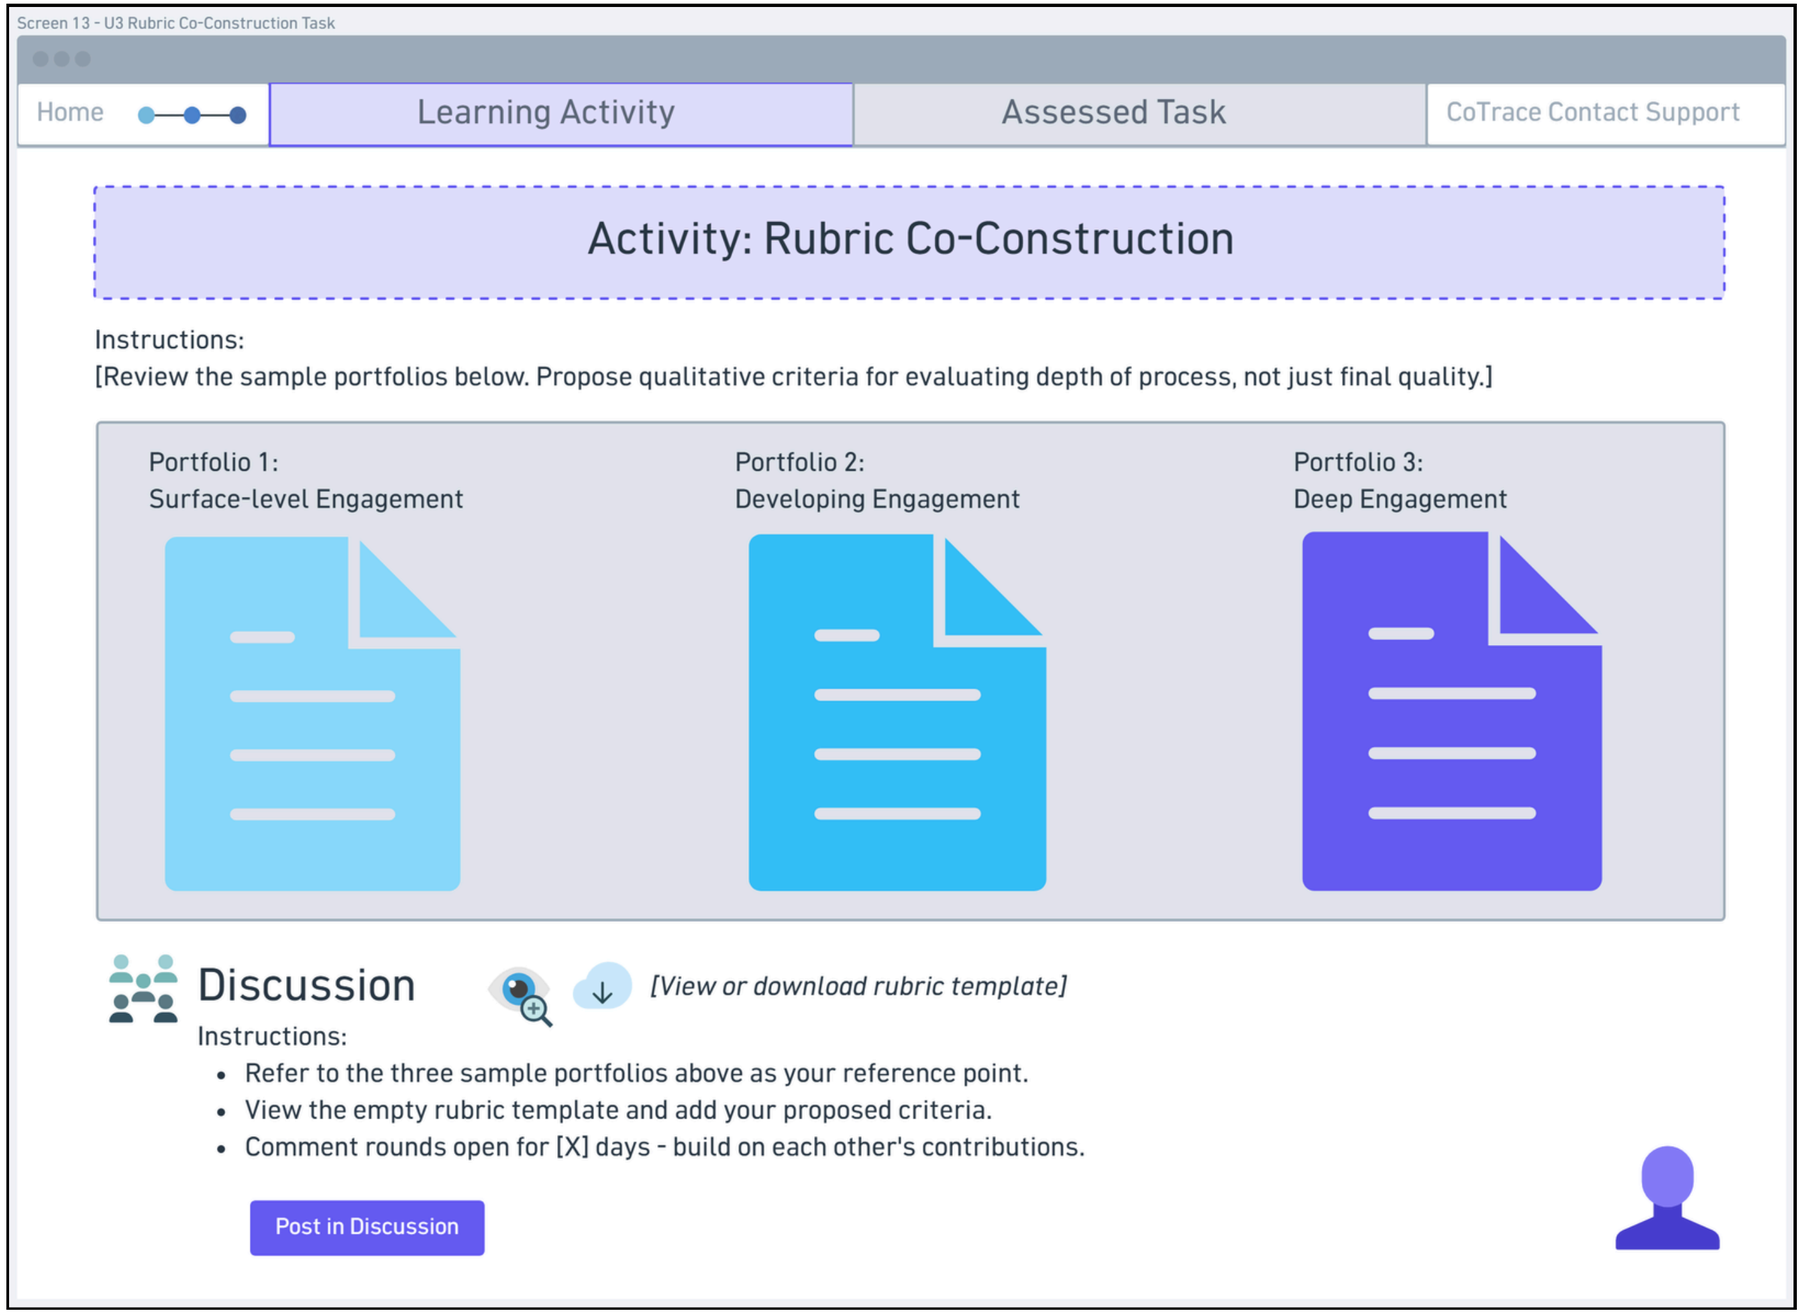

3

Unit 3:
Evaluating the Process

Activity: Rubric Co-Construction

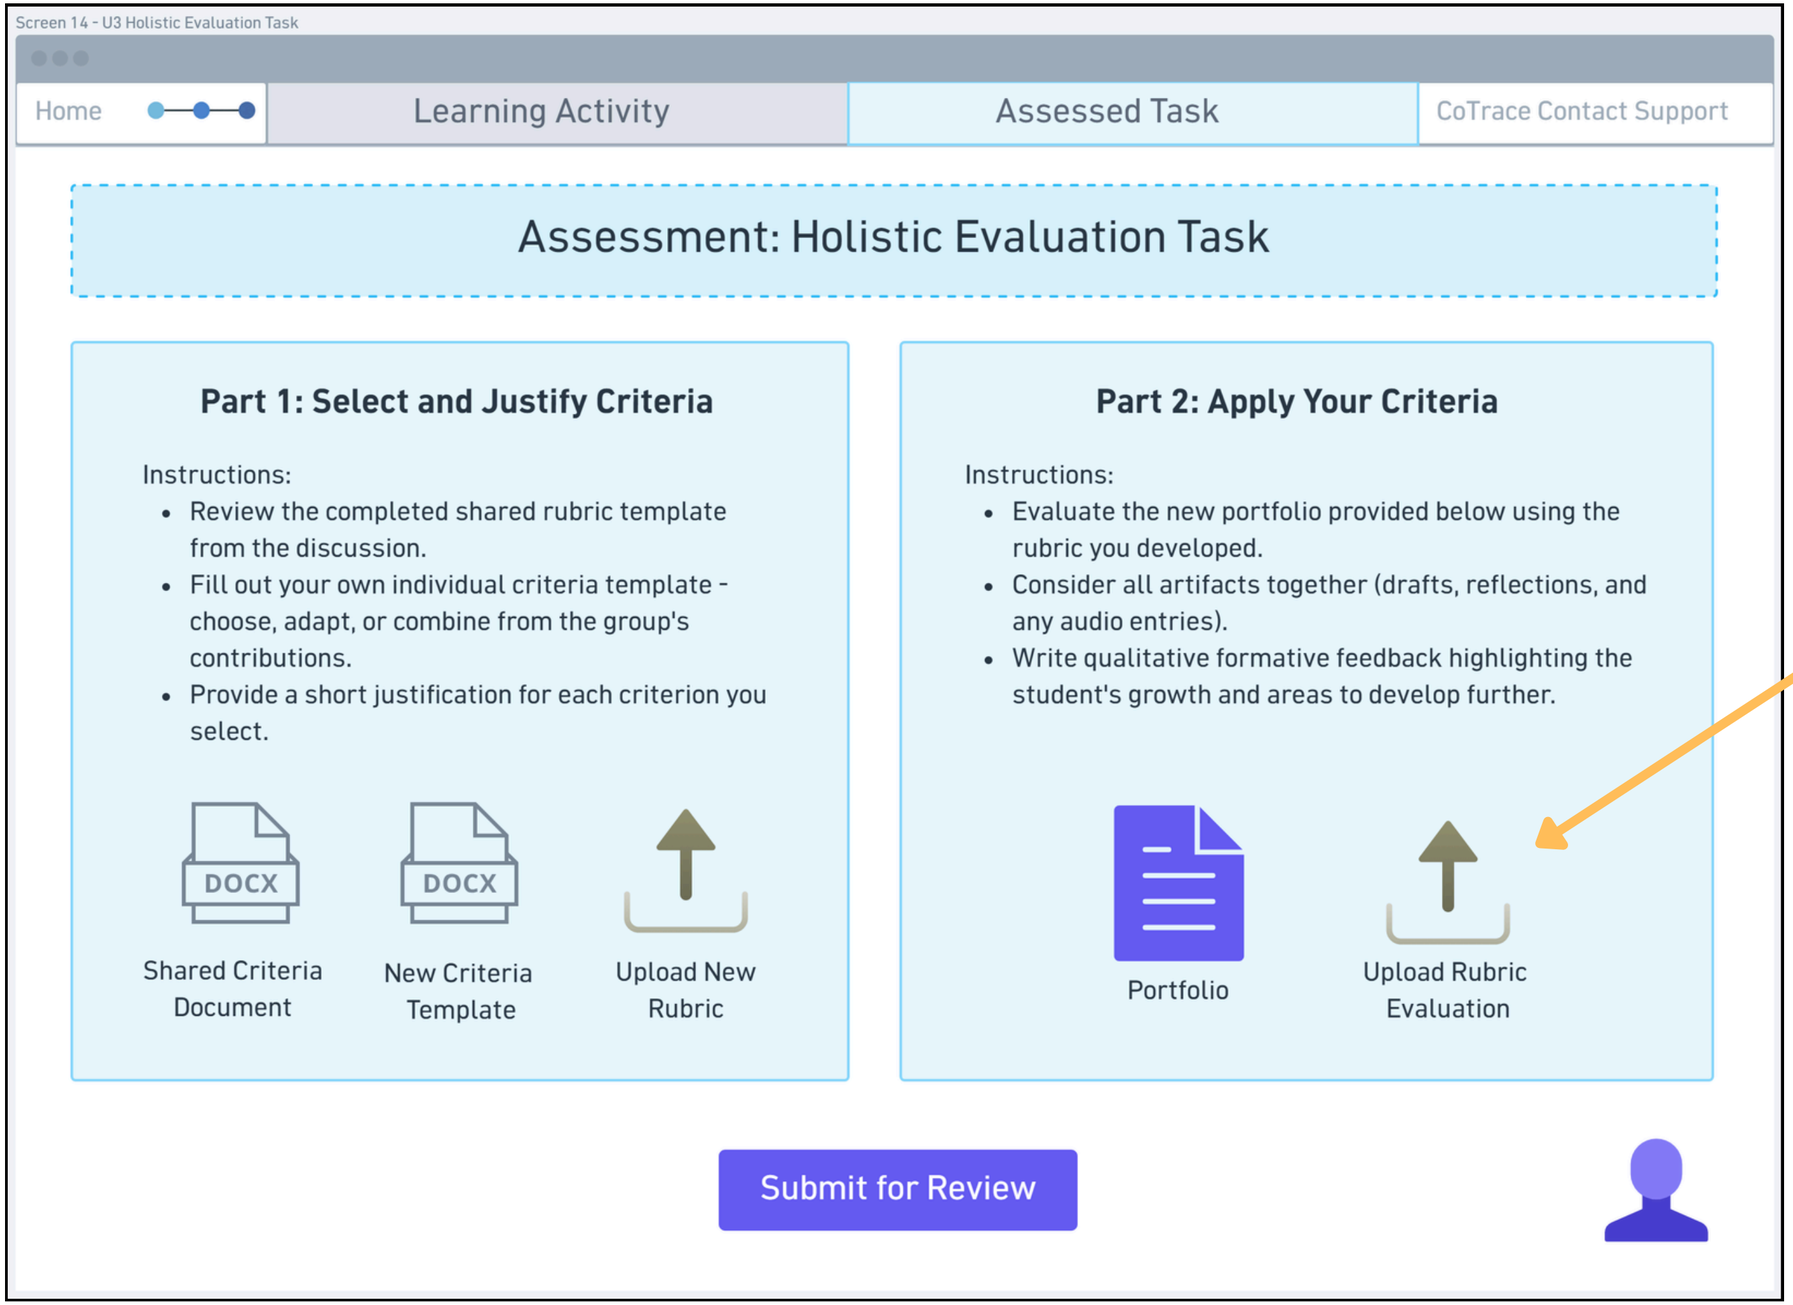

Assessment: Holistic Portfolio Evaluation

Screen 13 - U3 Learning Activity

- Visual colour-coding of each portfolio depth-level gives facilitators a non-textual anchor for what "depth" looks like before articulating it in words themselves.

Screen 14 - U3 Assessment Task

- Rubric template to be assessed contains a simple visual (a short written comment box), visually reinforcing the "no raw percentage mark" principle from the LO3 description.

Feedback:

- AI confirms completion only.
- Qualitative feedback on depth of process comes from a human reviewer.

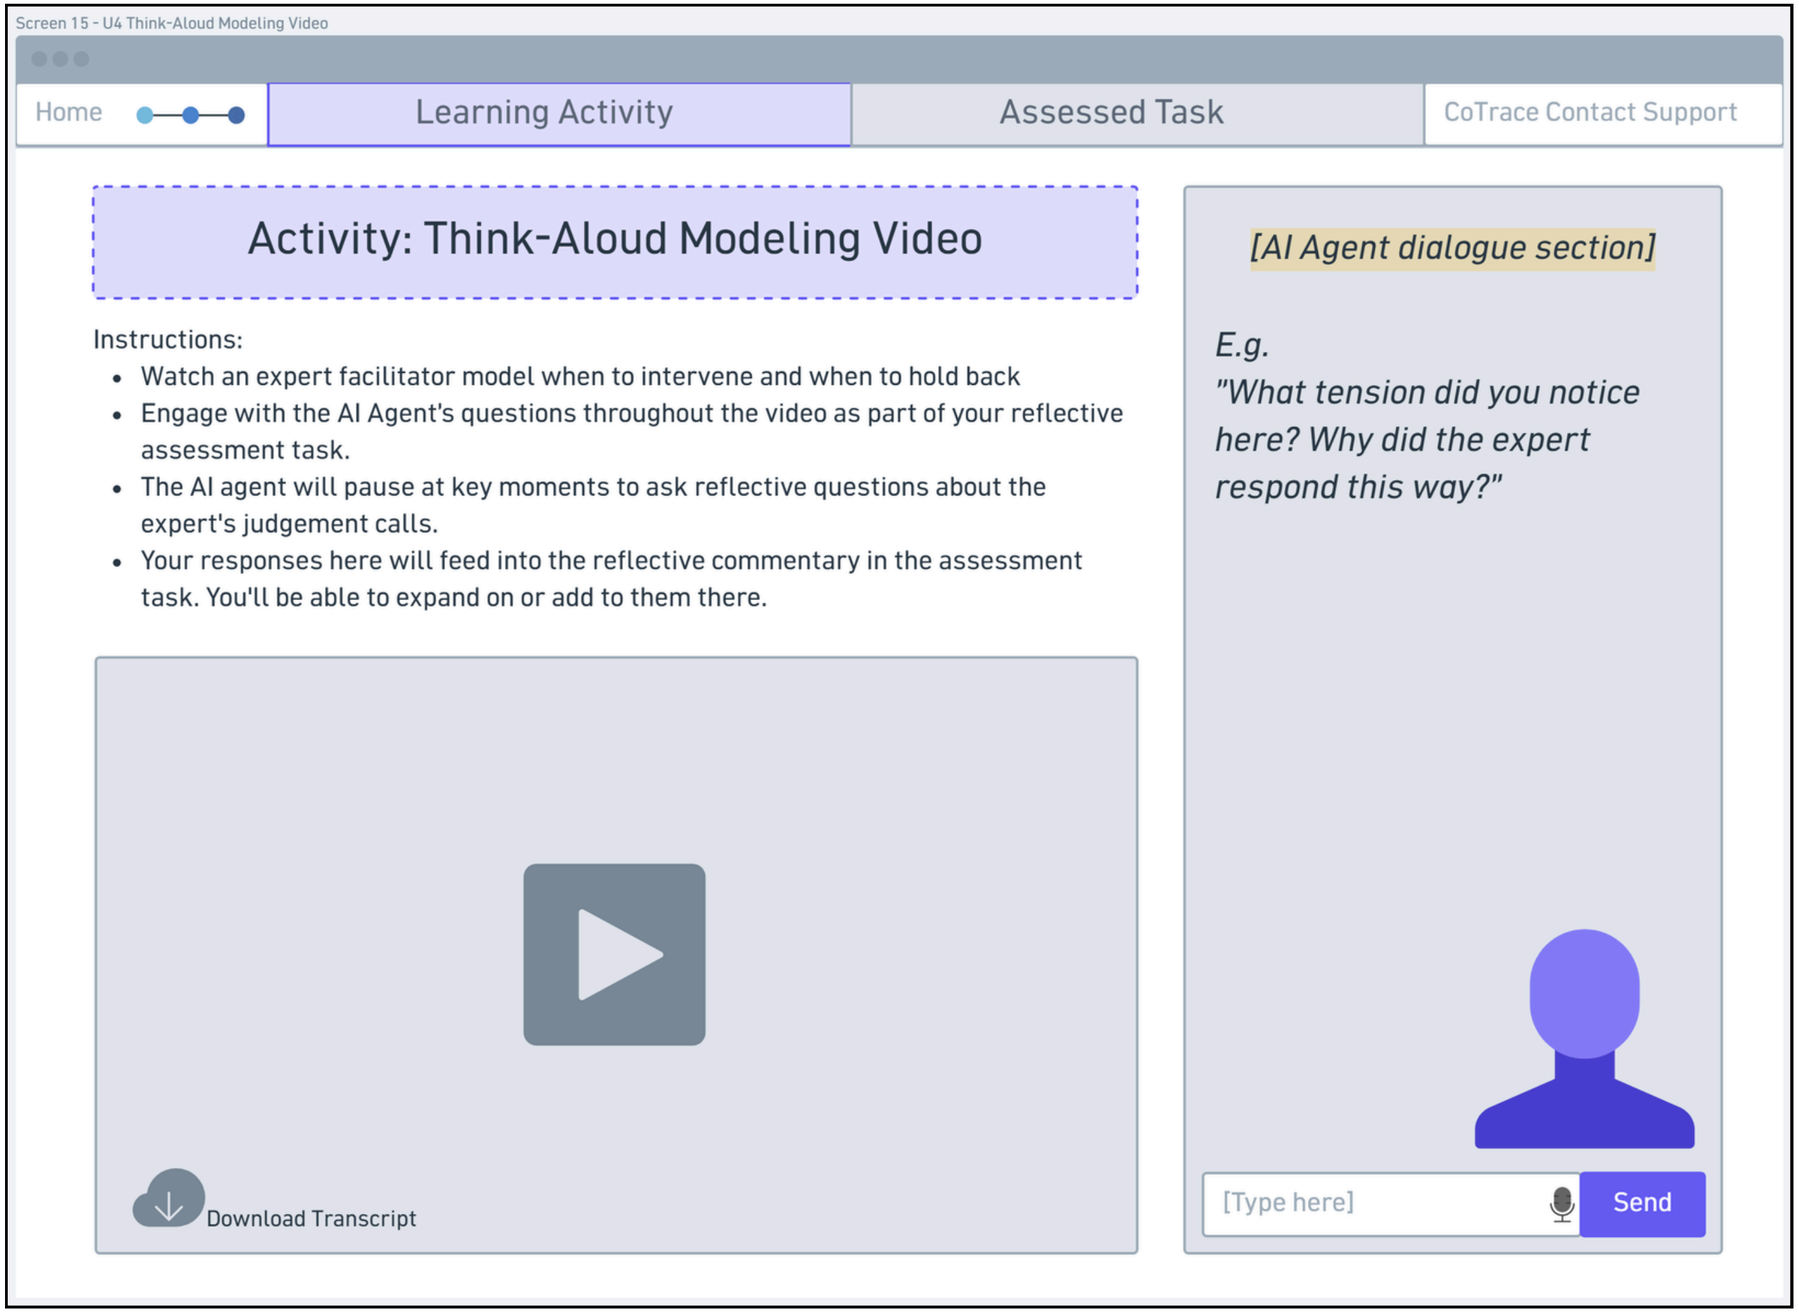

4

Unit 4:
Designing for Productive Fiction

Activity: Think-Aloud Modeling Video

Assessment: Task Design Worksheet + Reflective Commentary

Screen 15 - U4 Learning Activities

- Facilitators observe judgement being exercised in real time, building the mental model they'll need to design their own task in the assessment.

Screen 16 - U4 Assessment Task

Screen 16 - U4 Task Design Worksheet + Reflective Commentary

Home | Learning Activity | Assessed Task | CoTrace Contact Support

Final Assessment1: Task Design Worksheet

Instructions:

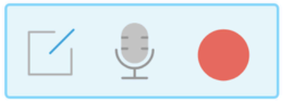

- Design your own ill-structured (open-ended) learning task, drawing on your experience across this orientation.
- Fill out the fields in the form below (auto-save).
- Click the agent icon if you need assistance or clarification regarding any fields.

1. **Task Title:**		4. AI-free and AI-mediated phases:	
2. Learning Goal:		5. Examples prompt types:	
3. Student Scenario:		6. One "hold-back" moment + justification:	

Final Assessment 2: Reflective Commentary

Instructions:

- Choose your mode of reflection (written / audio / video).
- Structured prompts are provided to guide your response.
- You may draw on your reflective journal entries and your responses during the modelling video.

Submit Design + Reflection

- Both parts submitted together as one deliverable.
- Agent available on-demand only - no active narration during this independent, assessed task.

Feedback:

- No AI-generated evaluative feedback here
- Human review only, given the personal and identity-related nature of this task (see Feedback Model, 4.2).
